Tam Blood Bank Management features document:-

Tam Blood Bank is a responsive blood bank and donor Content Management System (CMS). Agents can register and manage donors easily through making a payment through PayPal. In this CMS, agents will give their donor advertisements through paying to the website owner. Visitors will come and search for the donors and contact the agents or donors through their email, phone or message forms for any desired blood group.

This CMS has a nice and attractive front end and back end interface that are really awesome and eye-catching. The back end has a lot of nice and maintainable features that are needed for a modern and professional website to handle the contents easily by client. Almost all kinds of changes are possible to do using the admin panel without having any kind or programming language knowledge.

This CMS is built using the procedural php (with PDO feature) and without any framework. For this reason, it can be customized easily by most of the developers.

This CMS is protected against SQL injection, XSS and other attack and your website will be safe. Also in all pages, admin level security and invalid page url submission checking were done.
